

Juan Kaelig Minkoa

Regina, SK | (306) 515-2951 | jmj543@uregina.ca | [linkedin.com/in/juan-minkoa](https://www.linkedin.com/in/juan-minkoa) | juanminkoa.xyz

Mathematics and computer science student with a 95% math major average and strong organizational and analytical skills. Hands-on experience with data validation, process improvement, and operational reporting. Bilingual in English and French. Seeking the Operational Effectiveness Student Co-op to leverage an interest in continuous improvement.

EDUCATION

B.Sc. Mathematics & Computer Science | Overall: 88.8% | Math Major: 95% Expected Fall 2028
University of Regina (Campion College) | Regina, SK

- Relevant coursework: Calculus I & II, Linear Algebra I, Introductory Statistics, Differential Equations I, Data Structures & Abstractions, Vector Calculus, Proofs & Problem Solving.
- 1st Place, Data Science Olympiad | Participant, Putnam Mathematical Competition (2025).
- Bilingual: English (native) and French (native proficiency).

EXPERIENCE

VP Software Integration | Robotics Club Winter 2026 – Present
University of Regina | Regina, SK

- Collaborated within a cross-functional team of 8 to own the data collection and deployment pipeline for robotic control systems.
- Applied an analytical problem-solving mindset to diagnose system failures, recommending data-backed system enhancements that improved task success to 44.9%.
- Gathered feedback from team members to research and author a 55-page document management guide, driving continuous improvement (CI) in onboarding operations.

Operations Assistant (Volunteer) Sep 2024 – Present
Marian Home | Regina, SK

- Executed general administrative duties and validated daily operational reporting records to ensure 100% data accuracy for 50+ attendees.

PROJECTS

Dot — AI Browser Automation Agent | TypeScript, React, LangChain.js, Chrome MV3 2026

- Engineered a Chrome extension that automates multi-step web tasks using a three-agent architecture (Planner, Navigator, Validator) built on LangChain.js and Puppeteer/CDP.
- Designed and implemented four workflow templates (job search, research, data extraction, form filling) with a structured profile store for automated context injection.
- Built a custom design system (brutalist glassmorphism, dark mode, 3-tone palette) and integrated safety guardrails including financial transaction blocking and human-in-the-loop confirmation.

Automated Operational Reporting Pipeline | Python, LangChain Sep 2025 – Present

- Supported process improvement initiatives by automating data collection and validation across 30+ sources, reducing manual reporting time from hours to minutes.

Economic Data Analysis | Python, Excel, Power BI 2025

- Assisted with data collection, validation, and analysis on 15+ economic indicators to support operational reporting and continuous improvement.

Predictive Modeling | Python, NumPy 2025 – 2026

- Demonstrated high attention to detail and data accuracy by developing and validating statistical models from scratch without high-level frameworks.

LEADERSHIP & INVOLVEMENT

- **Putnam Competition Team Member** — Cultivated a strong problem-solving mindset and analytical skills by solving complex mathematical proofs weekly.

TECHNICAL SKILLS

- **Tools & Platforms:** Excel, Power BI, SQL, Git, Linux, Jupyter, $\text{\LaTeX}$
- **Languages:** Python, TypeScript, C++
- **Data & Operations:** Data Validation, Operational Reporting, Pandas, NumPy, Scikit-Learn
- **Methodologies:** Continuous Improvement (CI), Process Optimization, Cross-functional Collaboration
